

Total Electronic Contracting and Roland Systems Group present...

Live Video Production, Recording and Webcasting

The Roland [VR-5](#) has all the features necessary to mix your live audio and video content for viewing on a big screen at any event, while simultaneously expanding your audience to absolutely anyone who has internet access. The event can also be recorded and left online for viewing anytime!

Webcasting is a way of broadcasting events such as concerts, sports matches, corporate meetings or weddings over the internet live and for free. Until now any kind of professional looking webcast has required several pieces of equipment, but the new Roland [VR-5](#) has combined all the necessary technology into a single easy to use desktop device – at a very affordable price.

At this event you will see how to:

- Switch between 3 video sources, a PC source and built in video playback
- Mix 6 audio sources
- Overlay text and titles
- Output a professional looking mix to a large screen
- Record the final mixed output to a memory card on board
- Send a live service webcast around the world from your website and sites like Facebook

We look forward to showing just how easy it all is with the Roland VR-5!
